Technical Lead

[Portfolio](#) | [GitHub](#) | +2348066839838

Technical Lead with over 5 years of professional experience spanning backend engineering and technical operations. Proven track record of managing the end-to-end SDLC for high-scale products, including live launches in the Canadian market. Expert at translating complex technical constraints into actionable project roadmaps, managing outsourced talent, and leveraging tools like Jira and Agile methodologies to reduce release cycles by 20%.

CORE TOOLS

- JavaScript | Typescript
- Golang | Gin
- Node.js | Express.js
- Technical Writing
- Nest.js | Prisma
- Redis | RabbitMQ
- JIRA | Click-Up
- CRM Tools
- AWS
- Docker | Git
- OpenAI
- MongoDB | PostgreSQL

CORE SKILLS

- Outsourced Team Management
- Microservices
- System Design | Design Patterns
- Distributed Systems
- Database Management
- Cross-Team Technical Coordination
- Integration Testing
- Agile Development
- Testing: E2E and Integration
- Authentication & Authorization
- SDLC
- CI/CD Pipelines
- Data Modelling
- Stakeholder Management
- API Security & Management

PROFESSIONAL EXPERIENCE

Head of Technical Operations

Alvative Resources

2025 – Present

- Vendor & Workforce Management:** Manage a distributed team of outsourced technical support agents, serving as the primary technical liaison between external talent and internal engineering teams to ensure seamless service delivery.
- Performance Governance (KPIs/SLAs):** Established and monitor KPIs and SLAs (≥85%) for outsourced units, conducting weekly performance reviews and technical audits to maintain high service standards across client environments.
- Onboarding & Training Standardization:** Developed standardized onboarding and training protocols for outsourced agents, reducing average ramp-up time and ensuring deep alignment with technical product specifications.
- Technical Escalation & Sprint Integration:** Facilitate technical escalation paths between outsourced support and core engineering teams, streamlining the flow of bug reports and feature requests directly into active development sprints.
- Resource Optimization & Cost Reduction:** Optimized resource allocation and shift scheduling for the outsourced workforce, maintaining 99.9% service uptime and reducing operational overhead by 15%.

Lead Backend Engineer

Civil Drive, CA

2024 – Present

- Lead the Backend Delivery of 2 Live Products:** Managing the technical lifecycle and architecture for two applications launched in the Canadian market, ensuring all deliverables meet international performance and security standards.
- Orchestrated Scalable Architecture:** Design and deploy backend services using Node.js, Express, and TypeScript, managing the transitioning of services from development to live production in containerized environments.
- Engineered Release & Deployment Strategy:** Implemented CI/CD pipelines and automated testing suites that reduced release cycles by 20%, facilitating stable and frequent updates for active users.
- Manage System Governance & Uptime:** Oversee production monitoring and log analysis to maintain 99.9% uptime, coordinating rapid incident response to ensure service continuity in the Canadian region.
- Version Control & Workflow Leadership:** Established Git branching strategies and infrastructure-aware workflows, providing a structured environment for seamless feature integration.

Technical Support Specialist Paystack (Alvative Resources)

2022 – 2025

- **Advanced Technical Troubleshooting:** Diagnosed and resolved complex production integration issues using server logs, performance metrics, and API debugging tools to maintain high system availability.
- **Enterprise Incident Management:** Independently managed high-severity (P0/P1) incidents, achieving 99.9% resolution reliability while coordinating real-time communication between enterprise merchants and core engineering.
- **API & Integration Governance:** Analysed system performance and resource consumption to identify integration bottlenecks, providing technical recommendations that reduced infrastructure strain and improved client success rates
- **Cross-Functional Collaboration:** Contributed to large-scale system integrations, ensuring stable interoperability across distributed microservices by liaising between the product and support units.
- **Technical Documentation & Knowledge Sharing:** Authored internal technical guides and troubleshooting playbooks based on root-cause analysis of recurring integration issues.

PROJECTS

Senior Backend Engineer | Lavender

2025 – 2026

- **Directed Technical Reliability for Microservices:** Designed and maintained NestJS microservices within distributed environments, ensuring high availability and system resilience through proactive monitoring and debugging.
- **Resolved Complex Messaging Bottlenecks:** Implemented and supported asynchronous communication via **RabbitMQ**, diagnosing and resolving message-queue delays to maintain service decoupling and reliability.
- **Engineered High-Integrity Database Systems:** Managed PostgreSQL schemas and performance tuning, ensuring ACID compliance and transaction integrity for critical data flows.
- **Spearheaded Observability Initiatives:** Improved system observability and logging, significantly reducing integration-related failures and decreasing the mean time to resolution (MTTR) for production issues.).
- **Collaborated on DevOps & Scalability:** Partnered with DevOps teams to automate deployments via CI/CD, ensuring consistent environment parity and supporting scalable, containerized service configurations.

Software Engineer | Pennyfy

2024 – 2025

- **Engineered High-Availability Backend Services:** Architected and scaled AI-driven platform services handling **200K+ monthly requests**, maintaining 99.98% uptime through proactive monitoring and performance tuning.
- **Cloud Infrastructure & Support:** Deployed and managed services across **AWS/GCP**, optimizing compute utilization to reduce infrastructure overhead by 30% while ensuring stable service delivery.
- **Advanced System Optimization:** Implemented **Redis caching** and PostgreSQL query tuning to mitigate system load, demonstrating a deep understanding of how to resolve latency issues in high-traffic environments.
- **Security & Identity Management:** Built and supported secure authentication frameworks (**JWT, OAuth2**), enforcing production-grade security practices to protect sensitive user data.
- **Data Reliability & Performance:** Optimized database performance and query latency, ensuring data integrity and system responsiveness during peak traffic period.

EDUCATION

- **MBA. General Management | University of Lagos** 2022
- **BTech. Chemical/Petro-Chemical Engineering | Rivers State University** 2013

CERTIFICATIONS AND TRAINING

- **Software Engineering Fellowship | TIIDELAB** 2021
- **Project Management Professionals Training | JK MICHAELS** 2019
